## The electronic feeler gauge

Ideas for your success

## Gap measuring device gapMaster

Measuring principle:

We have developed the gapMaster for tasks where laser-optical and other measurement methods due to poor accessibility, reflective surfaces or different materials are unusable.

### Measurement inside the gap

With its thin measuring lance it can even penetrate into depths, which are outside the visual range. For example in the measurement on rotary machines as well as in the determination of internal contours.

### Independence of material and surface

The tactile sensor is independent of material and surface and has low measuring forces. The handy mobile device has a touch screen for display and operation. For the fast and reliable recording of measured values, test plans with semi-automatic processing can be configured. The data is stored locally and retrieved via USB or automatically transmitted via WiFi.

## Variants

### Interchangeable sensors

We provide the right equipment for precise measurement of different characteristics for various measurement tasks.

With the interchangeable sensors of the gapMaster, many applications are covered.

Depending on the requirements, straight or angled sensors can be used.

The sensor electrode, when immersed in a gap, determines the wall spacing by tactile probing. A special feature is the flexible sensor lance. The sensor can also be used on difficult-to-reach measuring points.

With coordinated software, different measuring processes are evaluated quickly and reliably.

### Unique selling point

# Technical Specifications

## Sensor

|                   |   |
|-------------------|---|
| Gap thickness:    | min. 0,20 mm<br>max. > 10 mm            |
| Measuring range:  | min. ca. 0,50 mm<br>max. ca. 6 mm       |
| Measuring depth:  | 1,5 - 950 mm                            |
| Measuring force:  | min. ca. 0,5 N<br>max. ca. 1,5 N        |
| Resolution:       | 0,001 - 0,003 mm                        |
| Accuracy:         | 0,03 - 0,05 mm                          |
| Basic hardness:   | 700 HV                                  |
| Surface hardness: | 100 - 2000 HV depending on requirements |

## Electronics

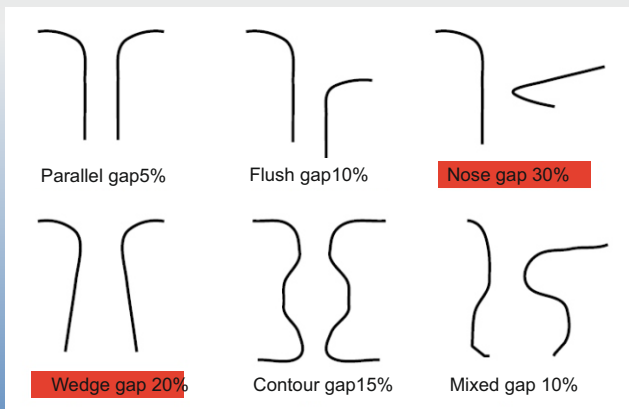

|                      |                                     |
|----------------------|-------------------------------------|
| Measuring frequency: | 50 Hz Android®, 80 Hz Windows®      |
| Resolution:          | 14 Bit                              |
| Interface:           | USB-Micro 2.0<br>optional USB-A 2.0 |
| Display:             | 1 LED                               |
| Service:             | 1 button                            |
| Cable length:        | 2 m                                 |

## Mobile device

|                 |                                      |
|-----------------|--------------------------------------|
| Screen:         | Touch-Screen 7"                      |
| Protection:     | IP54 Front, impact protection case   |
| Setting:        | with stand<br>optional magnet holder |
| Dimensions WHD: | 115 x 195 x 20 mm                    |
| Weight:         | 416 g                                |

## Standardization

### Gap measurement in the standardization

Gap types in technical areas

The comprehensive application possibilities of the gapMaster measuring principle allow the systematic analysis and structuring of the gap measurement.

This should be published in a series of standards of the German Institute for Standardization DIN. The content of this standard will be from conceptual clarification to other fundamentals to various applications.

The gap type expresses the essential geometric relationships of a gap, which are fundamental to its measurement. For example, the frequently occurring types of nasal and wedge gaps can not be visually measured. Conventional feeler theory fails in more than half of the measurement tasks.

## Patents

MFP owns patents, approvals and proprietary rights for various products and processes.

## Developments

The invention of the gap sensor offers a lot of room for further developments in this field. Against the background of 30 years of experience, MFP has set itself the task of supporting its customers in the gap measurement with optimized sensors, matched software for Android® and Windows® as well as latest electronics.

## Team and partners

We and our national and international partners will be pleased to pass on our extensive know-how in gap measurement technology, which we have gathered at the most diverse measurement projects and in almost all sectors since the invention of the gapMaster.
